BeamerLecture

- ▶ Builds some simple macros on to the \LaTeX -Beamer Class:
<http://sourceforge.net/projects/latex-beamer/>
- ▶ With one source file you can create 4 outputs
 - Lecture:** What you lecture from with full animation, etc.
 - Class2up:** A pre-lecture class handout with some material hidden
 - Post2up:** A post-lecture class handout with all material revealed but animation suppressed
 - Notes:** A portrait page version that puts your lecture slide on top, and your secret notes on the bottom.

hush environment

The `\hush` environment hides material from the `Class` handout

OK Class, the answer to today's assignment was:

Other goodies

- ▶ Using `\alert` environment puts text in Beamer's alert mode: `red` by default.
 - ▶ Example:
 - ▶ `\alert{produce this in red}` will yield `produce this in red`
- ▶ Using `\struc` environment puts text in Beamer's structure mode: `blue` by default
- ▶ Using `\alertl`, `\alertL`, `\strucl`, `\strucL` provides larger fonts
- ▶ Prepend `\hush` to any of the above to hide from the `Class` handout: `\hushalert`, `\hushalertl`, `\hushalertL`, `\hushstruc`, `\hushstrucl`, `\hushstrucL`.

This entire frame is included **ONLY** in the class handout.
Maybe useful to give the students a blank page or two for note taking.

Notes

L^AT_EX-Beamer provides a great note environment. My macros utilize it in the following way:

To add a note to yourself, in the **Note** version, add the note **within** the frame environment, at the end of the frame:

```
\frame{\frametitle{Hi Class}
  Welcome, I am your Professor.
\note{And you are the students!}
}%ENDFRAME
```

Using `\note{ }`, **with the space**, will keep the frame in the Note version without a note

Omitting `\note{}`, **or the space**, will remove the frame from the Note version

BeamerLecture also provides macros that make some command listing environments easy to access and use.
