BeamerLecture

- ▶ Builds some simple macros on to the \LaTeX -Beamer Class:
<http://sourceforge.net/projects/latex-beamer/>
- ▶ With one source file you can create 4 outputs
 - Lecture:** What you lecture from with full animation, etc.
 - Class2up:** A pre-lecture class handout with some material hidden
 - Post2up:** A post-lecture class handout with all material revealed but animation suppressed
 - Notes:** A portrait page version that puts your lecture slide on top, and your secret notes on the bottom.

hush environment

The `\hush` environment hides material from the `Class` handout

OK Class, the answer to today's assignment was:

hush environment

The `\hush` environment hides material from the `Class` handout

OK Class, the answer to today's assignment was:

4

hush environment

The `\hush` environment hides material from the `Class` handout

OK Class, the answer to today's assignment was:

4

Here is how to find the answer:

hush environment

The `\hush` environment hides material from the `Class` handout

OK Class, the answer to today's assignment was:

4

Here is how to find the answer:

- ▶ First, $1+1 = 2$

hush environment

The `\hush` environment hides material from the `Class` handout

OK Class, the answer to today's assignment was:

4

Here is how to find the answer:

- ▶ First, $1+1 = 2$
- ▶ Then, and this is the tricky part: $2+2=4$

hushframe

Using `\hushframe` will hide the entire frame from the `Class` handout.

Other goodies

- ▶ Using `\alert` environment puts text in Beamer's alert mode: **red** by default.
 - ▶ Example:
 - ▶ `\alert{produce this in red}` will yield **produce this in red**
- ▶ Using `\struc` environment puts text in Beamer's structure mode: **blue** by default
- ▶ Using `\alrtl`, `\alrtL`, `\strucl`, `\strucL` provides larger fonts
- ▶ Prepend `\hush` to any of the above to hide from the Class handout: `\hushalert`, `\hushalrtl`, `\hushalrtL`, `\hushstruc`, `\hushstrucl`, `\hushstrucL`.

This entire frame is included **ONLY** in the lecture handout.
Maybe useful if Case Exhibits are used that you do not want to
print and distribute or post note taking.

Notes

L^AT_EX-Beamer provides a great note environment. My macros utilize it in the following way:

To add a note to yourself, in the **Note** version, add the note **within** the frame environment, at the end of the frame:

```
\frame{\frametitle{Hi Class}
```

Welcome, I am your Professor.

```
\note{And you are the students!}  
}%ENDFRAME
```

Using `\note{ }`, **with the space**, will keep the frame in the Note version without a note

Omitting `\note{}`, **or the space**, will remove the frame from the Note version

Environments

BeamerLecture also provides macros that make some command listing environments easy to access and use.

Environments

BeamerLecture also provides macros that make some command listing environments easy to access and use.
